Survey and Analysis of Multiresolution Methods for Turbulence Data

Jesus Pulido^{1,2}, Daniel Livescu², Jonathan Woodring², James
Ahrens², and Bernd Hamann¹

¹Institute for Data Analysis and Visualization, University of California, Davis, CA, 95616-8562, U.S.A.

²Los Alamos National Laboratory, Los Alamos, NM 87544, USA

Submitted to Elsevier Computers & Fluids

Introduction

General

- ▶ Interest for multi-resolution representation of turbulence data
 - ▶ Feature discovery + tracking (coherent feature extraction)
 - ▶ Influence on simulation algorithms
- ▶ Downscaling of data (compression) for faster data analysis
 - ▶ For in-situ or post-processing applications
 - ▶ Faster post-processing of data for visualization

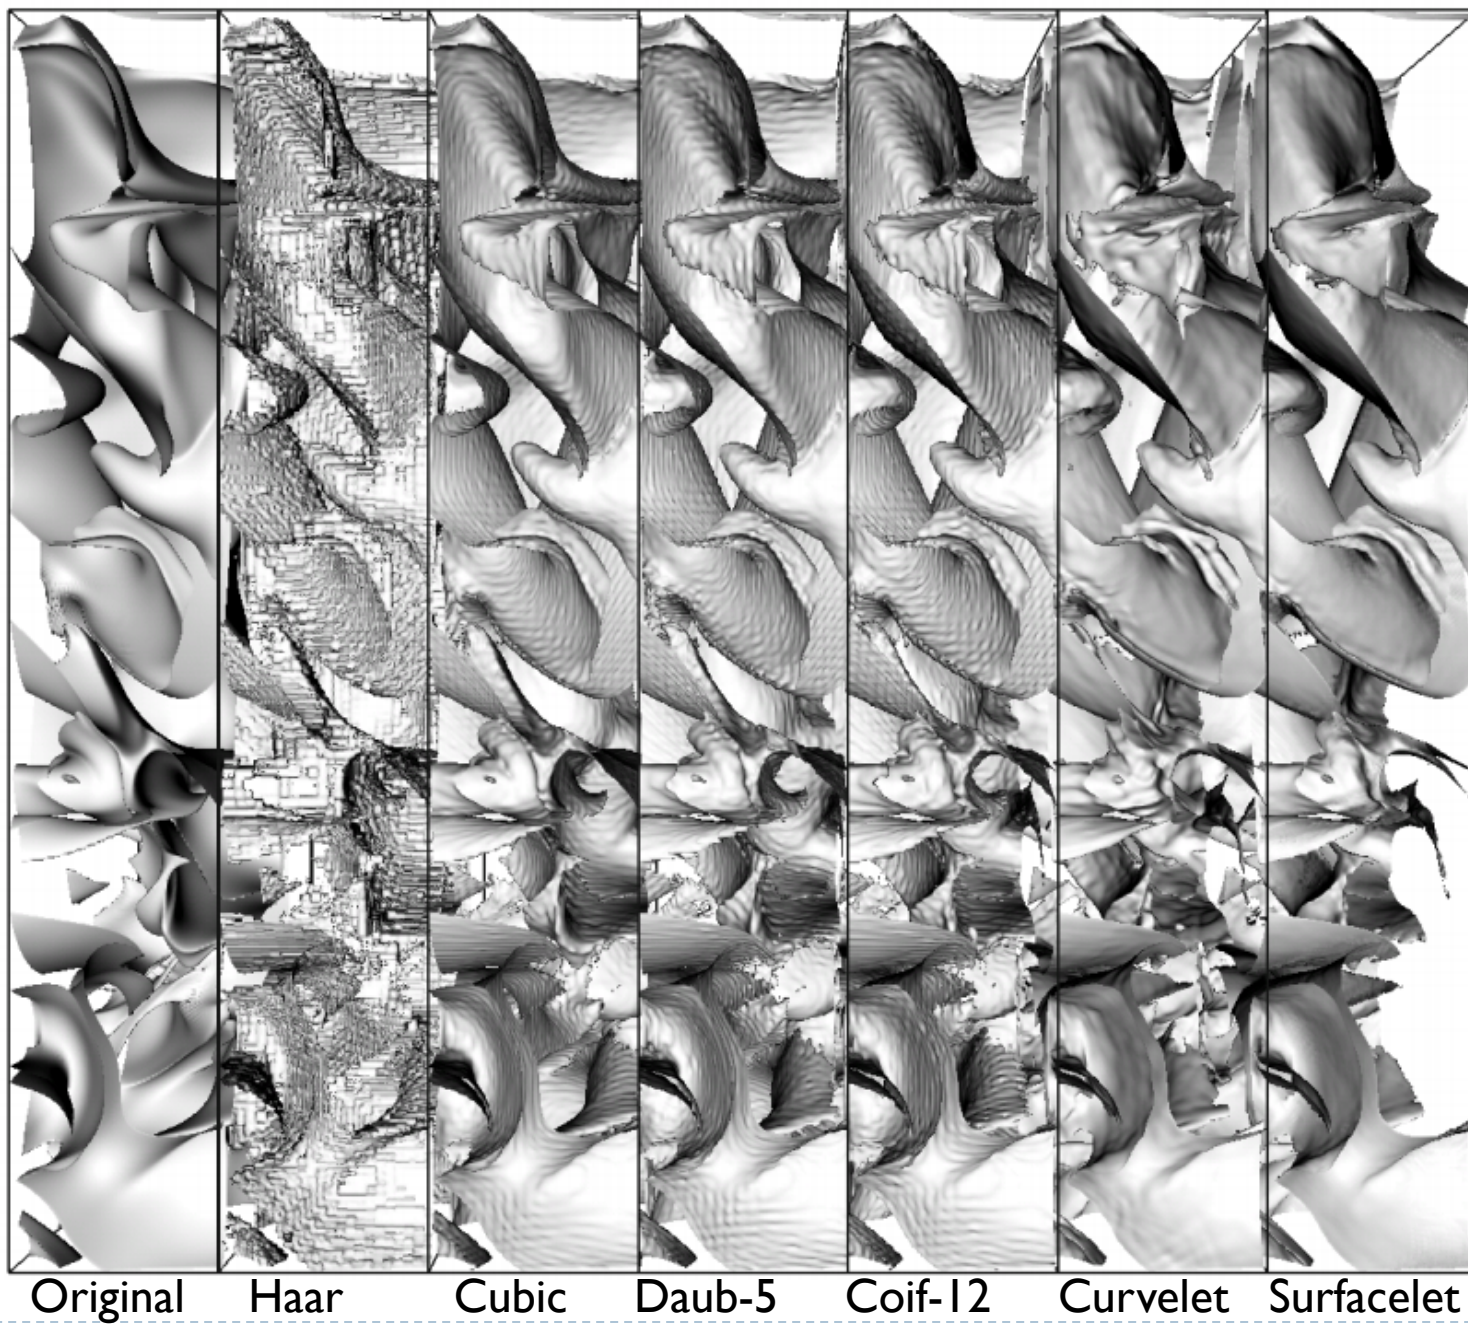

Contributions

- ▶ Analyzed and compared the effectiveness of Haar, Biorthogonal B-spline, and Daubechies wavelets, Coiflets, Surfacelets and Curvelets with respect to direct numerical simulation (DNS) data.
- ▶ Visualized and evaluated numerical accuracy of original data and derived quantities using limited amounts of coefficients on reconstruction
- ▶ Identified strengths and weaknesses of each technique and gave recommendations on the usage of these multi-resolution methods

Method

Improvements made this summer

- ▶ Added parallel computation support for wavelet framework
 - ▶ Near linear-time speedup
- ▶ Implemented parallel sort for fast wavelet coefficient sorting (for $N\%$ coefficient thresholding)
- ▶ Added edge-case handling for wavelet decomposition and reconstruction
 - ▶ Can treat data as parabolic, mirror, zero-fill, etc.
- ▶ Re-implemented the Dual-Tree Complex wavelet transform in C++ and included it into our analysis pipeline

Tests and Results

Summary

Test Type	Best Method	Runner-up
Velocity PDF	Cubic B-spline	Daubechies-5
Vorticity PSNR and MSE	Cubic B-spline	Quadratic B-spline
Vorticity PDF	Cubic B-spline	Quadratic B-spline
Strain rate tensor	Quadratic B-spline	Cubic B-spline
Density visualization	Surfacelets	Cubic B-spline
Density PSNR and MSE	Cubic B-spline	Quadratic B-spline
Density PDF	Cubic B-spline	Daubechies-5
Density power spectrum	Dual-Tree	Quintic B-Spline
Isosurface Visualization	Surfacelets	Curvelets
Curvature quantities	Cubic B-spline	Surfacelets
Surface signatures	All methods except Haar	---
Performance	Surfacelets	Haar

Revision resubmitted to Elsevier Computers & Fluids

Enabling Remote Visualization and Scale Analysis of Large Turbulence Databases

Jesus Pulido^{1,2}, Daniel Livescu², Randal Burns³, Curtis Canada²,
James Ahrens², and Bernd Hamann¹

¹Institute for Data Analysis and Visualization, University of California, Davis, CA, 95616-8562, U.S.A.

²Los Alamos National Laboratory, Los Alamos, NM 87544, USA

³Johns Hopkins University

Previously submitted to IEEE SciVis '15

Introduction

General

- ▶ Remote analysis and visualization of raw large turbulence data is challenging
- ▶ The Johns Hopkins Turbulence database (JHTDB) simplifies access to over 230 Terabytes of direct numerical simulation data through commodity hardware
- ▶ A demand exists for a visualization framework that adds high-speed remote visualization for large datasets

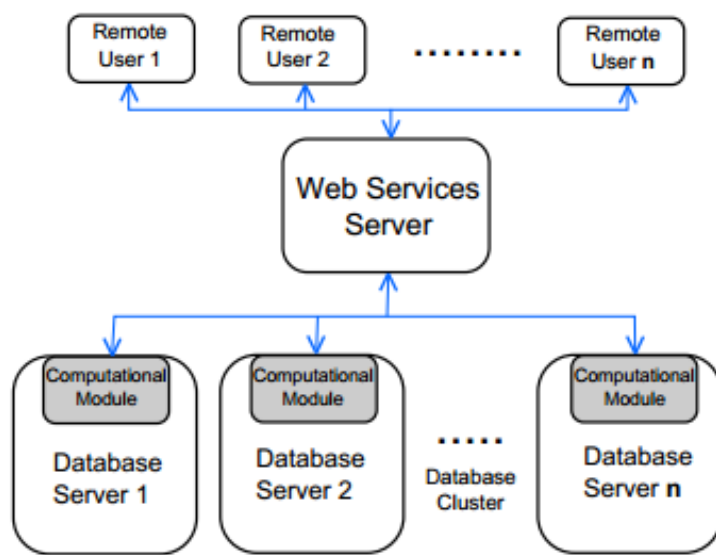

Contributions

- ▶ Remote visualization support and additional compute capabilities were added to the database cluster
- ▶ Wavelet compression was introduced at the data-level to reduce access cost, bandwidth, and improve visualization latency
- ▶ Wavelet compression used to reduce memory footprint of datasets for visualization

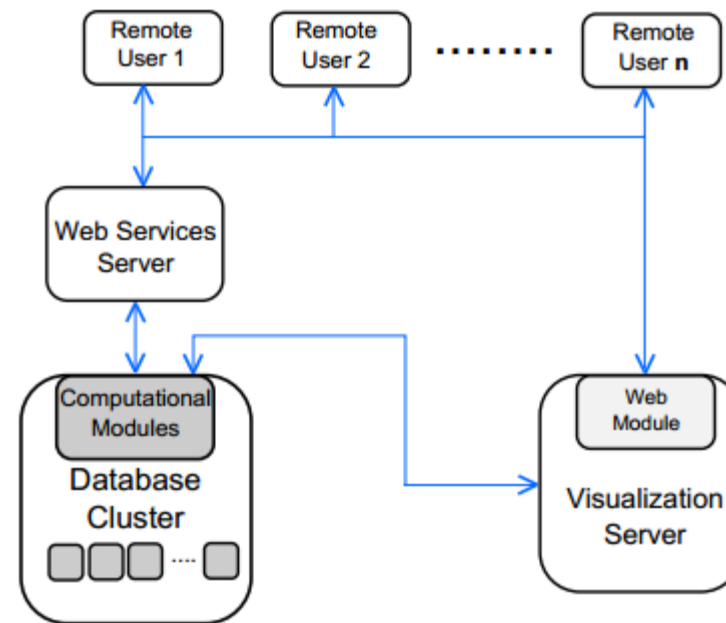

JHTDB: <http://turbulence.pha.jhu.edu/>

Johns Hopkins Turbulence Database

Original Pipeline

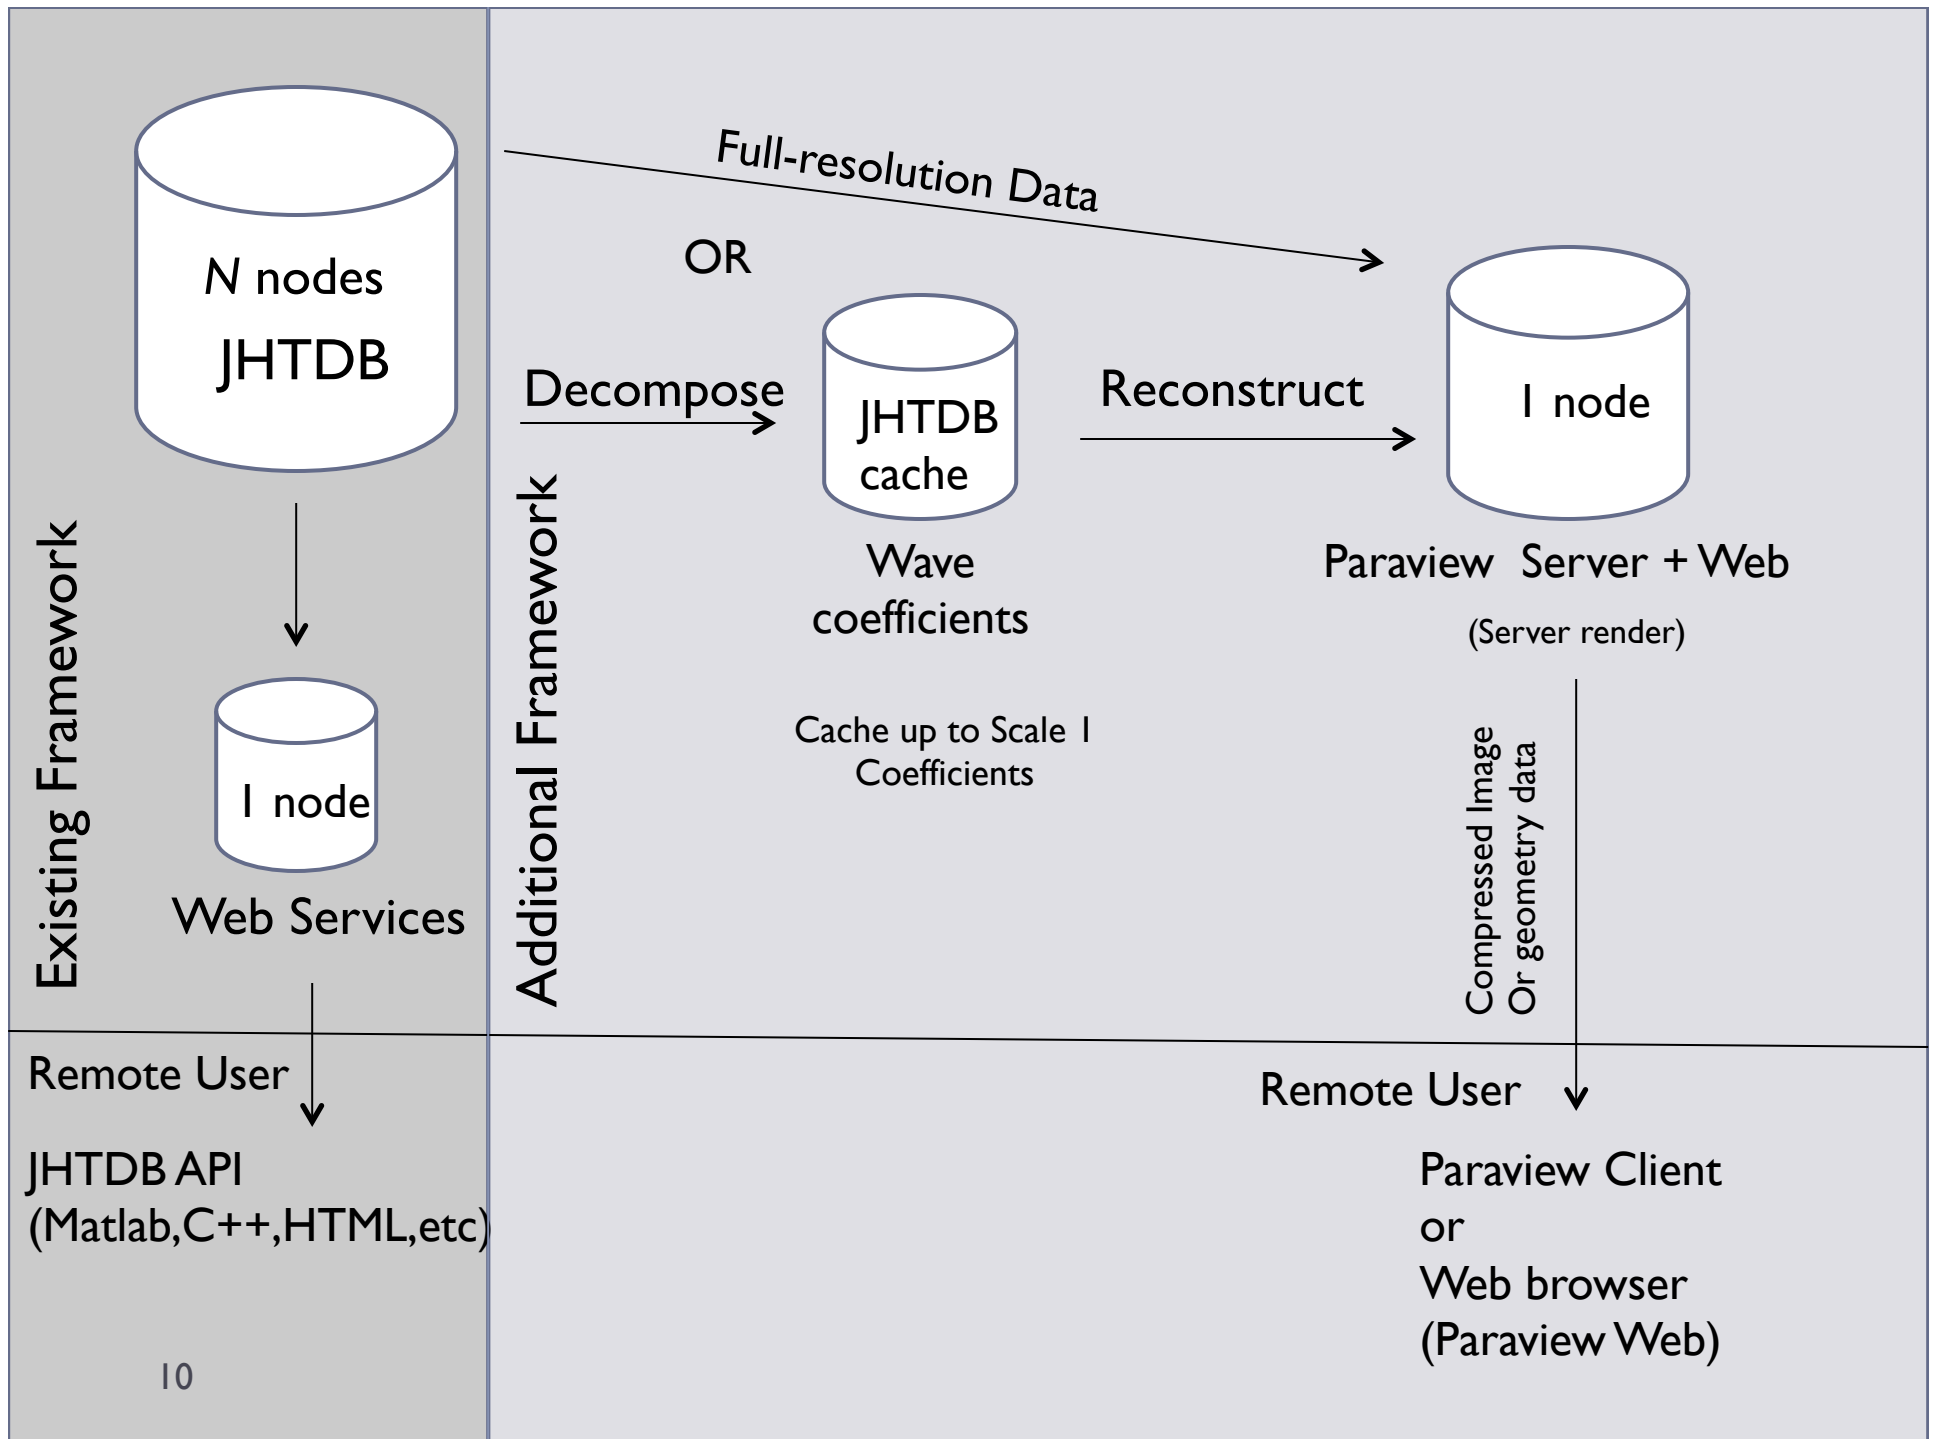

Augmented Pipeline

Remote visualization is achieved through Paraview and Paraview Web integration

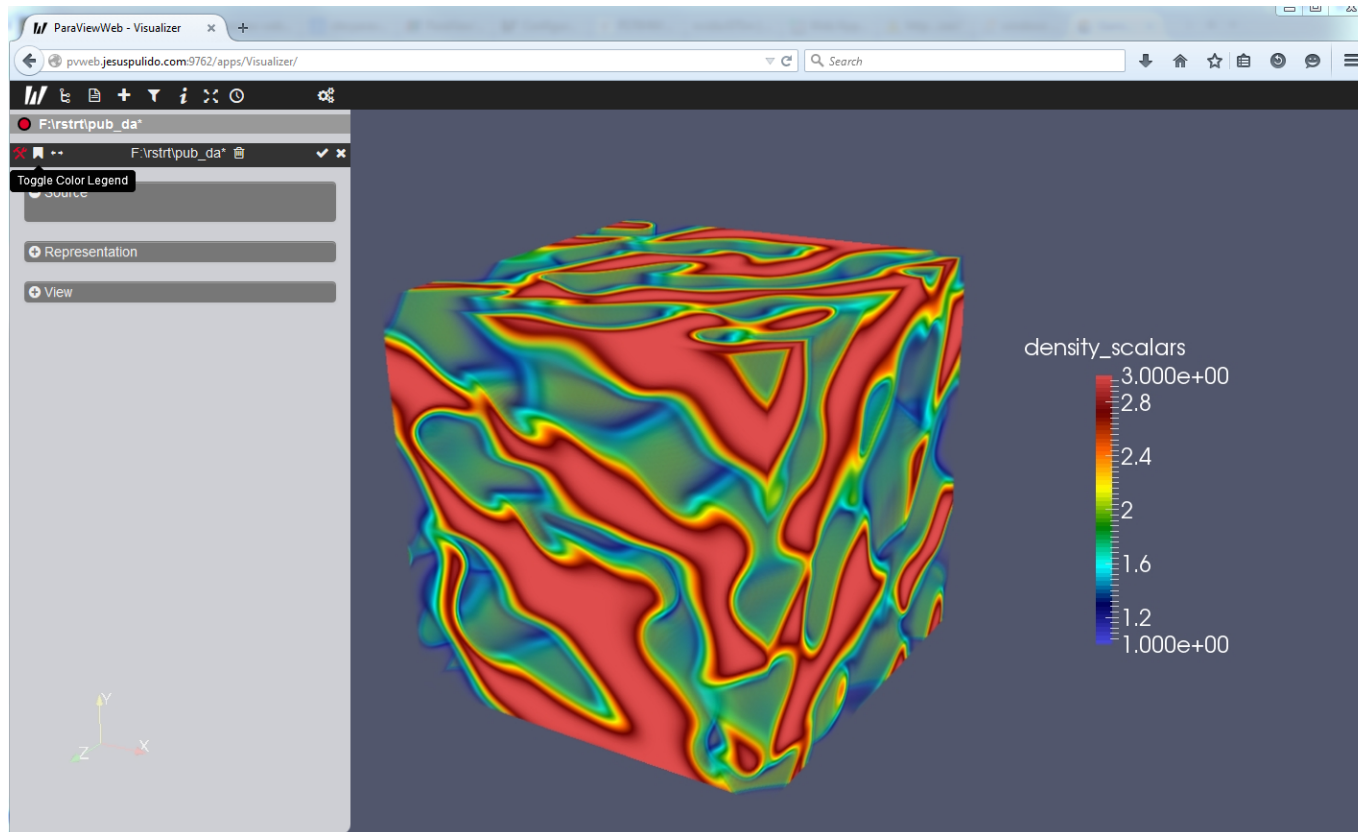

JHTDB: <http://turbulence.pha.jhu.edu/>

Tests and Results

Remote Visualization

► Web (HTML 5) interface

Tests and Results

Efficiency (Performance)

- Scenario: A single 512^3 grid size subset of a 1024^3 dataset is accessed and visualized by a single user.

TABLE I. PERFORMANCE RESULTS

Operation	Original (512)	Scale 1 (256)	Scale 2 (128)	Scale 3 (64)
Wavelet decompose	0 s	17.8 s	20.6 s	20.8 s
Wavelet reconstruct	0 s	23.3 s	23.2 s	23.3 s
Visualize volume	25.7 s	3.01s	0.22 s	0.02 s
Visualize isosurfaces	171.0 s	12.1 s	0.91 s	0.15 s
Total time	196.7 s	56.21 s	44.93 s	44.27 s
RAM used	4526 MB	865 MB	308 MB	178 MB
Est. Concurrent users	<14	<75	<212	<368

cubic B-spline wavelets

Intel Xeon E5440 @ 2.83 Ghz / 64GB RAM

Tests and Results

Efficiency (Performance)

- Scenario: A single 512^3 grid size subset of a 1024^3 dataset is accessed and visualized by a single user.

cubic B-spline wavelets

Open file	171 s	56.2 s	44.93 s	44.27 s
Wavelet decomposition				20.8 s
Wavelet reconstruction				23.3 s
Visualize volume				0.02 s
Visualize isosurfaces	171 s	56.2 s	44.93 s	0.15 s
Total time	196.2 s	56.2 s	44.93 s	44.27 s
RAM used	4526 MB	865 MB	308 MB	178 MB
Est. Concurrent users	<14	<75	<212	<368

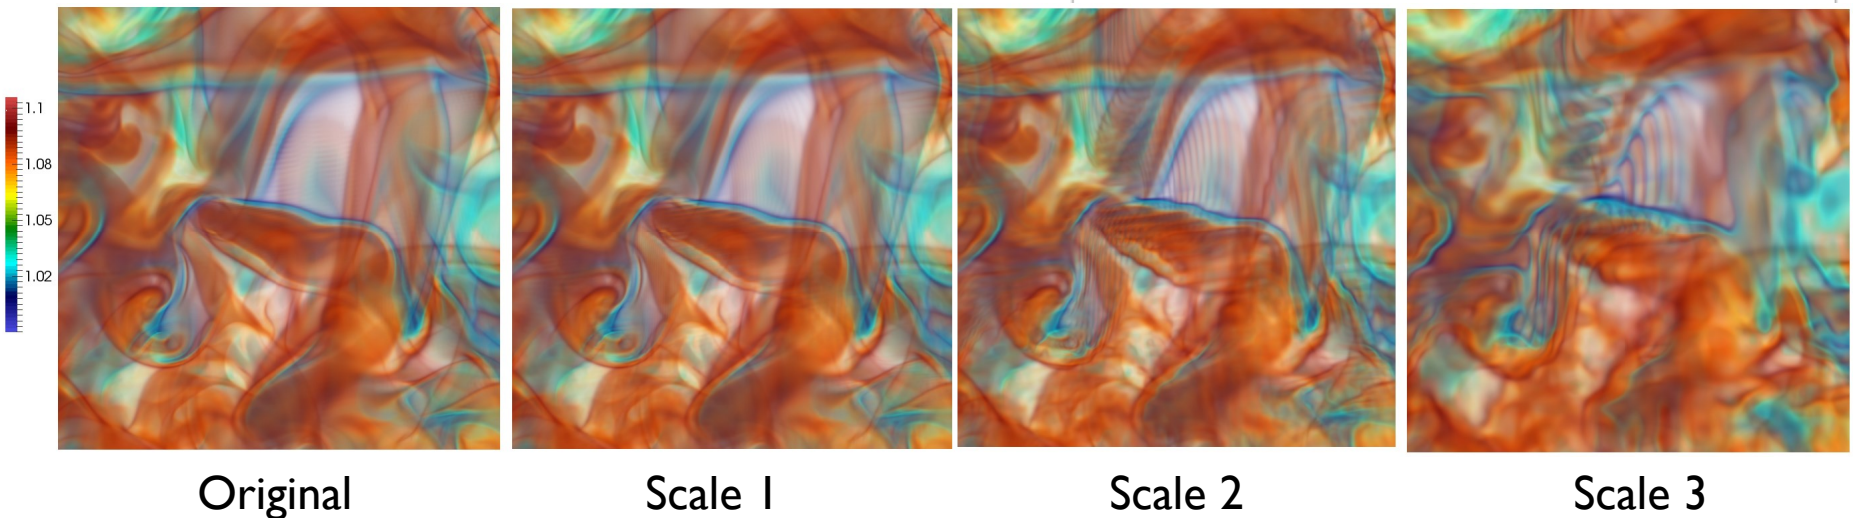

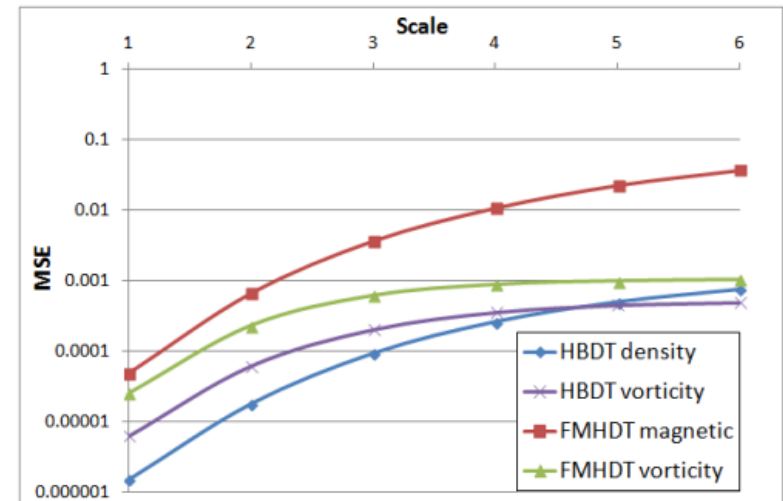

... and these are only Serial wavelet results, parallel benchmarks will be better!!

Intel Xeon E5440 @ 2.83 Ghz / 64GB RAM

Tests and Results

Quality

- Density component of a dataset is decomposed into 6 scales using cubic B-spline wavelets

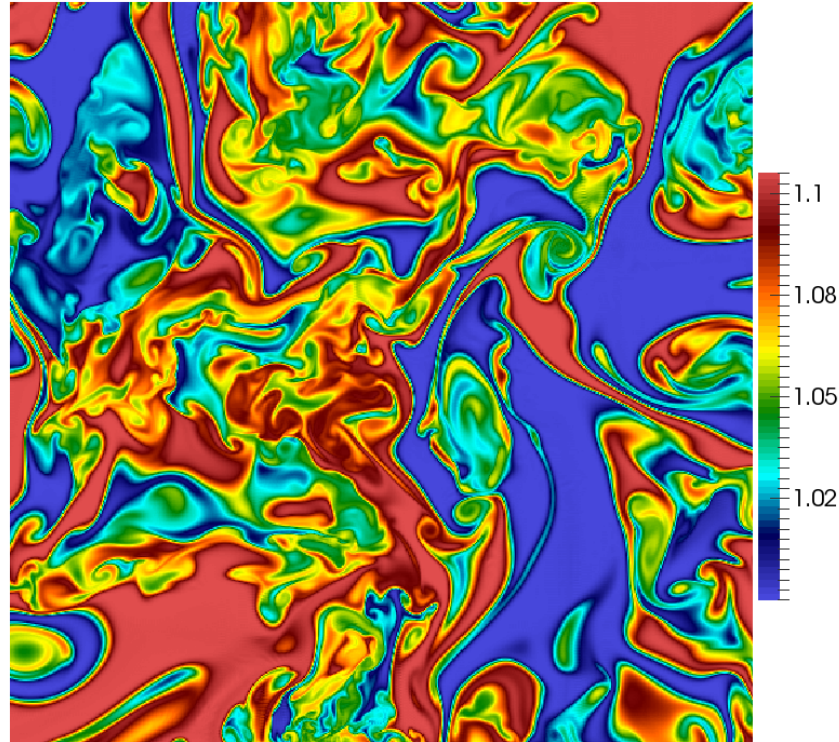

Tests and Results

Scale-based wavelet analysis

► Reconstruction of individual scales
